

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the most significant factor. This has been due to a number of factors, including a decline in the incidence of infectious diseases, a decline in the incidence of non-communicable diseases, and a decline in the incidence of violence.

The decline in the birth rate has also been a significant factor. This has been due to a number of factors, including a decline in the fertility rate, a decline in the age at which women first become pregnant, and a decline in the number of children born to each woman.

The decline in the rate of migration has also been a significant factor. This has been due to a number of factors, including a decline in the number of people who are emigrating, a decline in the number of people who are immigrating, and a decline in the number of people who are returning to their country of origin.

The increase in the number of people in the world who are aged 65 and over has also been a significant factor. This has been due to a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The increase in the number of people in the world who are aged 15–64 years has also been a significant factor. This has been due to a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The increase in the number of people in the world who are aged 65 and over has also been a significant factor. This has been due to a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The increase in the number of people in the world who are aged 15–64 years has also been a significant factor. This has been due to a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The increase in the number of people in the world who are aged 65 and over has also been a significant factor. This has been due to a number of factors, including a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.
